Companies selected in first-round screening (listed in alphabetical order, juridical personalities omitted)

Company name	Services details (to succeed in)
Datachain	Provides an enterprise Web3 wallet that supports the secure management and transfer of digital assets, including stablecoins, while balancing privacy protection with compliance requirements.
Digital Platformer	Provides a conditional payment infrastructure for financial institutions, local governments, and businesses by linking tokenized deposits with attribute verification.
Digital Securities	Builds a blockchain-based digital securities marketplace that enables the end-to-end issuance, administration, distribution, and secondary trading of digital securities among investors.
Dwilar (US)	Provides cross-border credit AI that unlocks credit for foreign nationals through their home-country credit data.
Elith	Provides a next-generation robo-advisory service for financial institutions and others that leverages financial engineering and behavioral economics to conduct sophisticated analysis of risk tolerance.
finoject	Provides a cross-industry framework for the joint operation of anti-money laundering measures in stablecoin and crypto-asset transactions.
IDENTIFAI LABS (Italy)	Provides an AI platform for financial institutions and others to assess the authenticity of images, videos, audio, and documents in response to deepfake threats arising from generative AI.
JPYC	Provides a B2B payment platform for small and medium-sized logistics companies and subcontractors in Tokyo that integrates commercial flows, logistics flows, and payment flows through the use of a Japanese yen stablecoin.
LIFEFAB	Provides a B2B2E (Employee) SaaS solution that supports employee asset building by visualizing each employee's effective annual compensation, integrating retirement benefits and pensions with salary and benefits based on corporate rules and HR data.
Ocean	In response to Japan's shift to a refund-based tax-free system in November 2026, provides a platform that returns tax refunds to inbound visitors via payment methods they commonly use in their home countries.
Securitize Japan	Provides a platform that enables local governments to directly offer digital municipal bonds online to individual investors without going through securities firms or other distributors.
SupraOS (France)	An AI operating system that helps financial institutions improve services, reduce costs, and develop new business.
ThinkCloud (Taiwan)	Provides a digital signature and identity-verification platform built on its patented technology to prove that a consenting person authorized a transaction in blockchain-based finance.

Turing Japan	In response to the tax-free system reform scheduled for November 2026, provides a platform that uses verifiable digital credentials to simplify refund procedures for both retailers and travelers.
